

CARE INSTRUCTIONS: SLATE-LITE

SLATE LITE™

31.03.2021

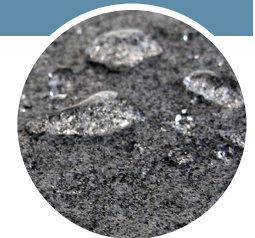

CLEANING / CARE

Clean your *Slate-Lite* decors in everyday use with a lint-free cloth and normal tap water. The stone surface is simply wiped with a damp cloth. Commercially available cleaning agents can also be used, provided they are free of grease and oil. Refrain from using harsh detergents. Test any cleaning agent beforehand on a test piece or an inconspicuous area. If you use *Slate-Lite* as a floor covering, please wipe the surface with a damp cloth, similar to parquet floors, and avoid standing water.

CALCIUM DEPOSIT REMOVAL

If you use *Slate-Lite* in wet areas and there are calcium deposits on the stone surface, you can remove these with commercially available cleaners (e.g. Cilit Bang). Carefully work in the cleaner with a brush and then rinse it off with plenty of clean water. Do not leave cleaner on the surface for too long. Test the cleaner you are using beforehand on a test piece or an inconspicuous area.

GREASE STAINS

To remove oil and grease stains, please use the *Akemi oil and grease remover paste* available in our range. This can be used to remove even intensive dirt from the stone surface. For more detailed instructions, please refer to the relevant product data sheet.

SCRATCHES

Scratches in the stone surface can usually be carefully sanded off. Use a sanding block or sandpaper with 150 grit for this. Before starting the sanding process, test your handling of the sandpaper on a test piece or an inconspicuous area. All available decors have been subjected to internal grinding tests, please contact us if necessary.

PRODUCTS FOR CARE & PROTECTION

In our range you will find a large number of protective and care products tailored to our stone veneers. For more information, please refer to our accessories catalog and the corresponding data sheets.
